

About Me

I'm a full-stack software engineer seeking a challenging and vitalizing position in a forward-thinking company. I am an analytical problem solver who is proficient in both front-end and back-end technologies.

Experience

Software Engineer - MediMobile (Georgetown, TX)

July 2019 - Current

Key contributions:

- Led technical design, scope decisions, and implementation of a configurable video training system to reduce support workload, doing a deep dive into the legacy system it was implemented in
- Contributed to iterative feature development in a new product that simplifies charge capture for clinicians
- Built tooling to automate and streamline common customer success workflows
- Created reporting to give executives visibility of support tickets
- Provisioned production infrastructure, including setting up VMs, installing and configuring dependencies, refactoring deployment workflows in CI, and documenting the process

Technologies used:

- C#, .NET MVC, MSSQL, JavaScript (ES5/ES6), Node.js, HTML5, LESS, Git

Skills

I have 3 years of professional experience doing full-stack development in a .NET oriented environment and I have a wide variety of hobbyist experience with many other technologies such as:

- React
- TypeScript
- GraphQL
- Docker
- Next.js
- C++
- Postgres
- Rust
